Education

The National Institute of Engineering, Mysuru - BE., CSE - CGPA 9.40 - 2022-Present

BASE PU College, Mysuru - 12th - 85% - 2022

Experience

Student Intern (part-time) - IEEE CS Internship and Mentorship Program - January 2026 - Present

- Developing adversarial AI models using TensorFlow and Qiskit to identify timing-based vulnerabilities in the BB84 quantum key distribution protocol.
- Designing quantum-resistant defense mechanisms including noise injection strategies, contributing to research deliverables on post-quantum cryptography.

Projects

Crypto X - Real-Time Cryptocurrency Platform

React JS, Vite, Node.js, Express.js, MongoDB Atlas, Chart.js, Tailwind CSS, CoinGecko API

- Engineered an end-to-end cryptocurrency intelligence platform featuring real-time price tracking, interactive Chart.js visualizations, and curated market news-serving data from dual API integrations with sub-second response times.
- Implemented secure JWT-based authentication with bcryptjs encryption on a Node.js/Express backend, enabling persistent user sessions and portfolio management across MongoDB Atlas.
- Crafted a glassmorphism-inspired UI with Framer Motion animations and responsive Tailwind CSS layouts, deployed on Vercel and Render.

KrishiAI - AI-Powered Smart Farming Assistant

React JS, Tailwind CSS, Python, Django, Django REST Framework, TensorFlow, NumPy, Panda

- Architected TensorFlow-based convolutional neural networks capable of diagnosing 8 distinct crop diseases from leaf imagery, empowering farmers with instant, actionable insights.
- Engineered a full-stack agricultural intelligence platform integrating React with Django REST backend for image upload and ML inference pipelines.
- Designed a mobile-first accessible interface using Tailwind CSS and DaisyUI, deployed across Vercel and Render.

MediConnect - Healthcare Appointment Platform

React JS, Node.js, Express.js, MongoDB, Razorpay, Agora SDK, Cloudinary, Nodemailer, Python

- Architected a full-stack telemedicine platform with JWT-secured authentication and role-based access control, featuring 20+ RESTful API endpoints serving patients, doctors, and administrators.
- Integrated Razorpay payment gateway and Agora SDK video consultations, enabling secure transactions, real-time remote appointments, and digital prescription generation.
- Developed an AI-powered symptom checker trained on 57 disease classifications, paired with automated email reminders via node-cron to reduce appointment no-show rates.

Skills

Programming: Java, C, Python, JavaScript, SQL

Frontend: React JS, HTML, CSS, Tailwind CSS, Bootstrap, Vite, Redux

Backend: Node.js, Express.js, REST APIs

Tools: MongoDB, Git, VS Code, Axios, Vercel, Render, Figma

CS Fundamentals: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, DBMS

Achievements

- Solved 375+ Data Structures & Algorithms problems on LeetCode and 300+ coding problems on GeeksforGeeks.
- Represented school at IIMUN conferences, securing 2nd place among top competitors through diplomacy and strategic negotiation.
